LoRaWAN Technology

Radio standard is independent of the network operator
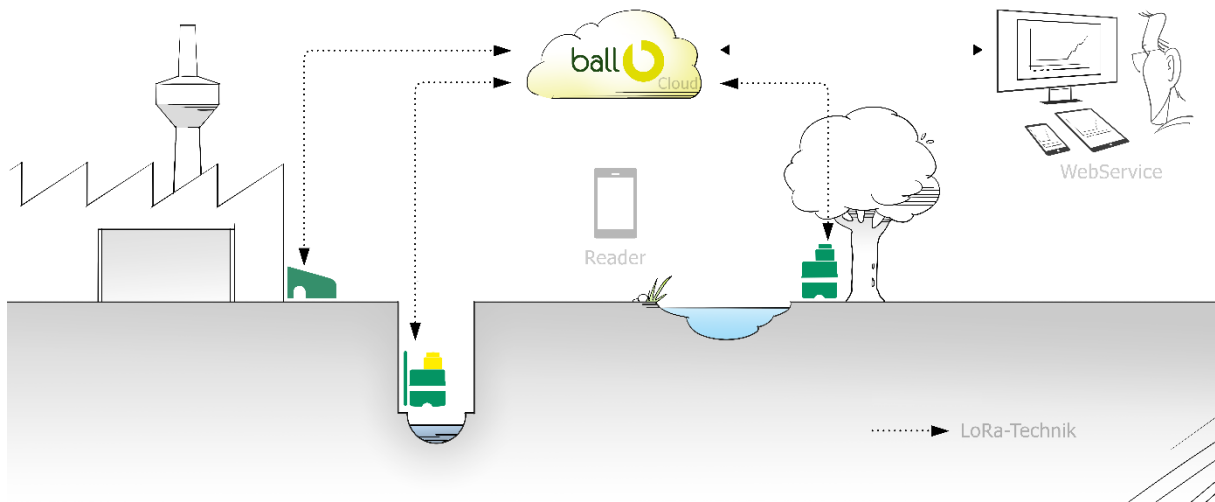

Use

Long**R**ange**W**ide**A**rea**N**etwork (LoRaWAN) is a radio standard that sends data from the ToxProtect to the WebService through the customer's own or existing gateways.

LoRaWan enables data transmission directly to the ball-b WebService.

Advantages

- **The data collection (number of rat visits) is sent directly to the WebService**

- **Longer battery life thanks to the consistent data transfer to the WebService**

- **The control of the rats can be organised directly from the office**

- **LoRaWAN can be combined with NB-IoT and ULE**

- **Expansion through the customer's own gateways**

Required

Unique LoRaWan Web Interface Part No. 15040
