# NB-IoT Technology (NarrowBand-Internet of Things)

Radio standard dependant on the network provider

Use

The NB-IoT technology enables the ToxProtect box to transfer data directly to the WebService.

Advantages

- **The provider (e.g. Deutsche Telekom) ensures the greatest possible network coverage**

- **The data collection (the number of visits made by the rats) takes place directly in the WebService**

- **Longer battery life thanks to the consistent data transfer to the WebService**

- **Includes a 10 year flat-rate, so no additional costs for the transmission of data**

- **Data can be observed and plans made to control the rats from the office**

- **NB-IoT can be combined with ULE and LoRaWAN technologies**
